

To: Hiring Team Vlaanderen Connect & Departement Onderwijs & Vorming

Dear,

I'm writing to express my enthusiasm for the Data Engineer position at Departement Onderwijs & Vorming which I found on the Vlaanderen Connect website.

My drive has always been to work with real purpose, work that contributes something meaningful back to society. This pull towards impactful roles has consistently led me towards the education sector. It started years ago when I gave ICT lessons at GLTT. Later at the VGC, I had the rewarding experience of architecting, developing, deploying and supporting IT solutions for different schools.

Each of these experiences deepened my passion for leveraging technology. By listening and analyzing the needs of schools and turning them into good cost effective solutions that support both teachers and students. More recently, I also volunteered at Viso Cor Mariae, another school. Here I analyzed their IT infrastructure and built a roadmap for improving their IT infrastructure.

While my job titles haven't always been 'Data Engineer,' a significant portion of my 10+ years in IT has involved core data engineering responsibilities. I've consistently worked with databases, crafting complex SQL queries, and both consuming and developing APIs across various projects. My coding experience is mostly in Python, using GIT as a versioning and collaboration system. At the Metro Group we worked with Agile principles where I also took part in the GDPR project for securing employee data and privacy. More recently, I've also expanded my toolkit to include ETL and data pipeline tools like Airflow during my time at BeCode.

I'm confident that my technical expertise combined with my passion for education would make a good fit for joining your data team to build an insightful, secure and fast data platform that directly contributes to strengthening our education system.

I look forward to discussing how my experience could benefit your team and would be pleased to elaborate further in an interview. Please contact me at your convenience to arrange a conversation.

Sincerely,

Gerrit Geeraerts
