

Dear Hiring Team,

I am applying for the role of Software Engineer Big Data that I found on the VDAB website.

I still remember that we visited Colruyt's with our school, more specifically we visited the arranging facility for empty bottles and to this day it leaves an impression on me, it was so far ahead of its time. I personally have perceived Colruyt always like this. A company that is on the edge of innovation and that uses its technological innovation to set a pricing standard that makes goods affordable for everyone. Together with the sustainability mindset, Colruyt is a company I would be proud to join.

The retailing business is also something that is not new for me. Not only have I worked at Colruyt when I was a student but I have also worked several years at Metro Group both as an in store sales person for their digital world but also as System Engineer. In this role and previous roles I have always liked working with programming languages.

Recently I became also inspired by AI and data and started a fulltime 9 month training at Bencode for a Data Engineering role. In this training we also did several projects with companies and also included a 3 month internship at SumSum (Cronos). My passion for tech also doesn't stop at work, it's also a hobby for me. I am very curious by nature and the tech world is a good fit for me, as there is always something new technology or some new tool that's being released. I love exploring them and learning them, talking about them with other people and experimenting with them in my homelab. At the moment I am learning for the Azure AZ-400 (DevOps) certification and the DP-600 (Fabric) is in the pipeline.

I am confident that my passion for Colruyt and data technology makes me an ideal candidate for this position. I would welcome the opportunity to discuss how my enthusiasm and expertise could contribute to Colruyt. I look forward to the possibility of meeting with the Hiring and Devops team at Colruyt to further elaborate on how I can help to contribute to a data reservoir platform that leads to valuable insights and improvements as your Software Engineer Big Data.

Kind Regards,
Gerrit Geeraerts
