

Dear Verity Jagger,

I am writing with genuine enthusiasm about the "Data Engineering" position at CM. This role feels like it was written for me. Above all, I am looking for a job that contributes to society and gives me a sense of purpose. CM's commitment to facilitate and promote a healthier wellbeing for everyone is very important in our society, a mission that resonates deeply with me due to my own positive experiences with CM.

Seeking work with purpose and social impact has been a consistent driver in my career. An example is at VGC, my task was to architect, develop and implement solutions to support schools to make them more productive and contribute to the education of our children.

I am a lifelong tech enthusiast with Data and AI being at the forefront of my current endeavours. Previously, I worked as a System Engineer/Developer. In these roles, I gained a lot of experience in IT, including relevant experience for this job vacancy like working with Python, Docker, Cloud (Azure) and AWS, Git and I have worked in an Agile Environment. Recently I became inspired by AI and data and started a fulltime 6 month training at Bencode for a Data Engineering role. In this training we also did several projects with companies and also included a 3 month internship at SumSum (Cronos) where I did 2 projects on AWS.

My passion for tech doesn't stop at work, it's also a hobby for me. I am very curious by nature and the tech world is a good fit for me, as there is always something new technology or some new tool that's being released. I love exploring them and learning them, talking about them with other people and experimenting with them in my homelab where I have several projects running where I use python, dockers and an airflow server, MLflow server (MLops), ...

I am confident that my passion for Data/AI and the meaningful social role that CM plays in society, makes me an ideal candidate for this position. I would welcome the opportunity to discuss how my enthusiasm and expertise could contribute to CM. I look forward to the possibility of meeting with the Hiring and Data team at the CM to further elaborate on how I can help to contribute to a data platform that leads to valuable insights and improvements as your Data Engineer.

Thank you for considering my application.

Sincerely,

Gerrit Geeraerts
