Functieomschrijving

Our client is a prominent player in the financial sector, recognized for its comprehensive range of banking and financial services. With a global presence, it serves a diverse clientele, including individuals, corporations, and institutions. Emphasizing innovation and customer-centricity, it leverages advanced technologies to deliver tailored solutions that meet the evolving needs of its stakeholders.

What you will be doing

The Tribe AI develops and builds augmented intelligence applications. In this context we are looking for professionals with knowledge of Python and more specifically Django to help design, build and test interactive tools to annotate data and validate results of Machine Learning models.

As a member of the agile team, the dev engineer applies several useful skills (analysis / design / development / testing / integration), which in combination with the skills of the other members of the team compose all required skills to deliver value at the end of each sprint. More specifically of the Django Dev Engineer we expect knowledge of the Django templating system, htmx, usage of background job queues and connection to other API.

Function description

As part of the team, the dev engineer commits to help the team to deliver value at the end of each sprint. This is achieved by interacting with our stakeholders and translating their needs into solutions that integrate in the IT Fabric of the bank. The focus is on the completion of the team's backlog in the order that has been agreed between the various stakeholders and the Product Owner based on the added value for the (internal or external) client.

Technical experience:

- Strong experience in Django
- experience in software engineering in Python
- GIT (Version Control System).
- Experience in MLOps or DevOps

- experience with testing frameworks (Gherkin, Behave)
- Polyglot (knowledge of other programming languages)
