EDUCATION

Professional Bachelor

KaHo Sint-Lieven, Ghent
2005 - 2008

Industrial Sciences

Don Bosco, Halle
1999 - 2005

PROFILE

I'm a curious and creative professional with a broad range of interests and a passion for technology. I enjoy exploring new technologies just as much as connecting with people, whether customers or colleagues, by exchanging ideas and learning together.

I naturally think outside the box and like to dig deep to understand the core of a problem. My strength lies in combining critical thinking with hands-on work, building flexible, modular solutions that can grow as needs change.

I work best in a hybrid setting: focused tasks at home, collaborative ones on-site. Above all, I'm driven by meaningful work where curiosity, creativity, research, and teamwork come together to make a real impact.

Tech Skills

AWS Azure Airflow DevOps Docker CI/CD Kubernetes ML(Ops)
MLflow Terraform CatBoost ETL LLM (NLP) Matplotlib Seaborn
Numpy Pandas Scikit-Learn Spark LangChain LangGraph LangSmith
RAG Ragas Bash Powershell Python SQL HTML CSS Django
FastAPI Scrapy Selenium Streamlit Elasticsearch Neo4j SQL
Active Directory Linux DHCP, DNS, Firewall, iOS Proxmox Windows Server
Agile Confluence GIT IoT Jira Power BI Teaching

WORK EXPERIENCE

Data Engineer

Cronos (SUMSUM) & Bencode

03 - 12/2024

A full-time 9-month AI training including a 3 month Internship and different projects with companies.

- **Developed reporting tool**

Generate highly custom report with visuals about project statuses via collaborative LLM Agents

- **Developed RAG Chat bot**

Developed AI-powered collaboration platform solution during 3-month internship

Developer / System Engineer

VGC

work-description2019-2023

For VGC I took the technical lead for the Digisprong and took initiative and project lead to upgrade there existing hybrid infrastructure to a full cloud Azure solution that is more user friendly, secure, low maintenance.

- **Digisprong**

Modernize schools to create a seamless, inclusive, and low-maintenance digital learning environment focused on iPads that is designed to enhance the educational experience for teachers and students with disabilities. Change management, together with a leading teacher inspiring colleagues to onboard on this digital jump. I especially enjoy working the with the users with more resistance getting to them to onboard them. I took the technical lead in discovering different solutions and testing them, analyzing how to integrate in our existing infrastructure and which suits best to the needs of the teachers. Using a phased roll out with test users to get feedback and adjust. My work on this project also led to initiative to improve the existing infrastructure by migrating fully to the cloud and create a multi platform sync.

- **Cloud migration & infrastructure simplification**

I took the initiative and project lead to discover and analyze the current IT infrastructure, I saw a lot of potential to improve. Migrating from a fragmented multi domain on-prem hybrid Infrastructure towards a more unified cloud solution with lower operational load, more secure more user friendly infrastructure and created a road map for improvements. I took the lead in technical implementation and making sure that colleague's part of the solution, coaching them and upgrading there skills as 1 day they have to move on without me and maintain and expand the infra without me. As well as change management ensuring ALL users are also using the infrastructure as intended, communicating with management and end users, giving training's and mentoring the users to get over barriers. For me its also important that ALL users are onboard I focus on the the users have the biggest barrier and involve these users in training's, as they become role models of overcoming barriers and stimulate other users to get on board. Fractional deploying solutions step step taking in user feedback to steer as we go.

- **Multi platform sync and install manager**

I took the lead, designed and developed of User sync and install platform that speeds up hectic starts of a school year. Cutting workload when it matters, improving user experience and increase compliance.

Developer / System Engineer*Metro Group*

2014 - 2018

I started out as store support employee offering IT support to 1 big store and 1 small store, expanded with an extra big store. I ran out of these perimeters of this job quickly and proactively took responsibilities of co joining the network (CISCO) team where i managed switches, routers, firewalls, wifi across all national stores. I also joined the user team responsible for GDPR, User accounts and experience and took over the lead for backup solutions.

- **Store support**

I did store support for 2 big and 1 small store as the company was restructuring the IT department I was responsible in my stores to coach end user to be more self reliant and train power user to take on "simple" IT requests and boosting the IT knowledge of the operational personnel. What i am good at is the hard users, users that have a barrier or resistance against IT, it is a passion of me to take a way friction in jobs with tech but people can have resistance to change and an I like to listen to end users to see what pain point are and build it solutions but its also important that this gets followed up and that people can actually use the new tool and get over their barriers. I do not only love to build solution that are better but have an A to Z approach that a solutions lands well and actually gets used.

- **Network**

After I started I took on pretty quickly a new responsibility to join the networking team, a more technical role where I am managing switches, router, wifi, firewalls, dhcp, dns and tech work with starting up of network with new stores as well as a revision of our neglected for to long networking solutions.

- **User Accounts & Experience**

I also joined the User team redesigning our User account and an user access policies. I was mostly technical involved in this project developing user creation scripts, ans creating self service user applications to install mailboxes, printers. Automatically creating documentation for compliancy.

- **Backup responisble**

Take over the lead in tape backup solution reevaluation of current backup solution and making sure backup is trustworthy. Developed app for an extra control layer over tape transfers to an offsite location.

Sales Digital World*Metro Group*

2011 - 2014

Sales role focused on creating a great customer experience.

Developer / System Engineer

Universiteit Gent

2009 - 2010

Developed a workflow tool: Streamlined workflows via custom tool.

Developed new features for smart textiles website.

IT Infrastructure for textiles department I also maintained: networks, servers, ...

PROJECTS & VOLUNTEERING

Volunteered at Viso Cor Mariae

2024

I helped this school in need, Analyze there IT infrastructure, create roadmap, start on implementing and find train and startup a permanent successor.

Home lab

I have a home-lab where I actively experiment and test out technologies as it is my main hobby I spend a lot of time here.
